

Concrete Pulverizers

Our Pulverizers are designed to be operated direct from the machines existing hydraulics without the need of an extra hydraulic service.

Available for 7 to 100 ton machines

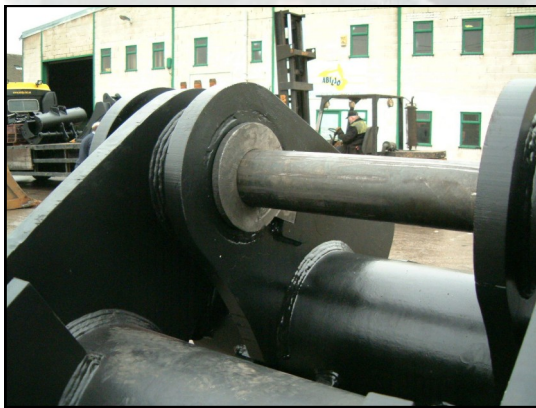

They mount directly to the end of the dipper and link as with a bucket and then have a brace arm which pins to the underside of the dipper using a brace pad (supplied) to hold the fixed half in place

The Pulverisor hinges on the main dipper pin and comes complete with a longer hardened main pin. The main hinge uses 2 hardened top hat bushes to hold the 2 halves together when the main pin is removed, and the hinge also has replace-able hardened insert bushes.

The lower crushing legs and toeplates are manufactured completely from Hardox 400 and 450 type material for strength and for increased attachment life

They are also available for quick hitch mounting but be aware this does reduce the crushing force!

All pulverizers for machines 13 ton and upwards include rebar cutters in the throat.
