Boxed Leg Rock grabs

Heavy Duty Rock specification grabs are designed for rock handling and placement on coastal defence type projects. They are built to a high specification including 400HB toe-plates and wear ribs on the inner skins for added wear protection when handling rock

All grapples require a 3 point brace pad welding to the underside of the dipper to hold the fixed half of the grab in place. All grabs are supplied c/w the brace arm and weld on pad and are available for direct mount, supplied with a hardened main pin and top hats or can be supplied for quick hitch mounting

Machine size	Moving jaw	Static jaw	Max opening (Z)	Rock specification	
	Width (A)	Width (B)		Part No.	Weight (kg)
12 to 15 ton	750mm	1100mm	2300mm	RG130	810
16 to 19 ton	750mm	1100mm	2300mm	RG160	1350
